### Notes

- If the maximum loads specified for load dump and jump start are fully utilized, subsequent polarity reversal of the AUTO varistors is inadmissible.
- If the load remains under the maximum ratings, polarity reversal may be admissible.  
Contact S+M Components for consultancy on this problem.
- Load dump and jump start can decrease the varistor voltage in load direction by max. 15%.
- Load dump: min. time of energy input 30 ms, interval 60 s.
- Further automotive varistors are contained in the new data book (German edition due to appear in November 96, ordering no. B462-P6213) and in the short form catalog (ordering no. B462-P6211-X-X-7400).
